

and it has only been advanced in the case of the Flickers, Meadowlarks and a few other rather anomalous cases.— W. S.

Annual Report of the Chief of the Biological Survey.¹— Mr. E. W. Nelson's report as chief of the U. S. Biological Survey for the year ending June 1919, contains much of interest. The amount of appropriations available for the work of the Bureau was greater than ever before, including \$592,000 from the Federal Government and over \$800,000 appropriated by State Governments and other bodies for work in cooperation with the Survey. It is estimated that the destruction of noxious animals resulted in a saving of live stock valued at five millions and of forage and crops valued at fourteen millions.

The bulk of the report deals with the destruction of noxious mammals. The ornithological work consisted largely of investigating charges against various species of birds. Among these was the destruction of fish by Mergansers and Pelicans, the case of the former being held open while the latter was proven harmless to species used as human food. The Night Herons in Louisiana were charged with being injurious to the frog industry but this was disproved as was the charge against the White-winged Dove of destroying grain in Arizona. In the case of the Bobolink, while charges of damage to crops in the lower Delaware Valley were found to be groundless, there was found to be great damage to the rice crop in the southern states and an open season for shooting these birds was granted from Pennsylvania and New Jersey southward.

Much additional information of this nature is contained in the report which seems to show that several species regarded as beneficial when the effort toward bird protection was initiated must now be regarded as injurious at certain times and places and necessary steps taken for their control.

It is welcome news to learn that in addition to various publications of the Survey noticed in these columns during the past year, we may look at an early date for the appearance of reports on the birds of New Mexico and Alabama.

The supervision of the National Bird Reservations during 1918-1919 has been in charge of Dr. G. W. Field while Mr. G. A. Lawyer has conducted the administration of the migratory bird treaty.— W. S.

Shufeldt on the Birds of Brazil.²— In the August number of the 'Bulletin of the Pan American Union,' Dr. Shufeldt has compiled a popular account of the birds of Brazil illustrated by a number of photographs, mainly from specimens in the U. S. National Museum. The paper is arranged systematically beginning with the Rhea and reaching the Parrots on the ninth page, all the rest of the avifauna being disposed of in a couple
